

Murray Robertson is a composer and sound designer whose artistic practice is centered on a synthesis of real-world and virtual sonic elements. He is passionate about interactive art and interactive music systems; particularly in the way that sound can both augment and be augmented by a user's interaction. Combining computer code, live performance, and traditional composition/production, he focuses on saturating digital spaces with sound.

Murray's use of RNBO, Unity game engine, Wwise, and other interactive sound frameworks has brought his art into spaces such as video games, web designs, and custom digital instruments. Hailing from south-east and central Ohio, Murray has studied music and sound at Capital University, the Estonian Academy of Music and Theater, and Northwestern University. You can find examples of his work at murrayrobertsonmusic.com.
